CONNECTIONS

■ Example of telephone interface connection

Replacing battery of remote control unit

- The battery life is approximately a half year. When the life has expired, please replace the battery with a new battery.
- The remote control unit uses a lithium battery (CR2025).
- Insert battery following the illustration inside the battery box, taking care not to reverse the ⊕ and ⊖ polarity.

DISASSEMBLY FOR REPAIR

1. Remove the screw (❶) and remove the top panel.
2. Press the OPEN button (❷) and remove the control unit.
3. Remove the sub panel by pushing the 4 claws (❸) open, and remove the flexible wire (❹).

1. Unplug the board connector (❺).
2. Remove the 4 screws (❻), move the cassette mechanism upward to make a space below it (❼), and unplug the connector (❸).

KRC-954R

DISASSEMBLY FOR REPAIR

1. Straighten the 3 claws (**9**) on the chassis using a pair of pliers, etc.
2. Remove the 5 screws (**10**). As the screw marked (**10**) * is of a different type from other screws, be careful to use it in the same position at the assembly.
3. Remove the lever and the screw (**11**), and remove the board unit.

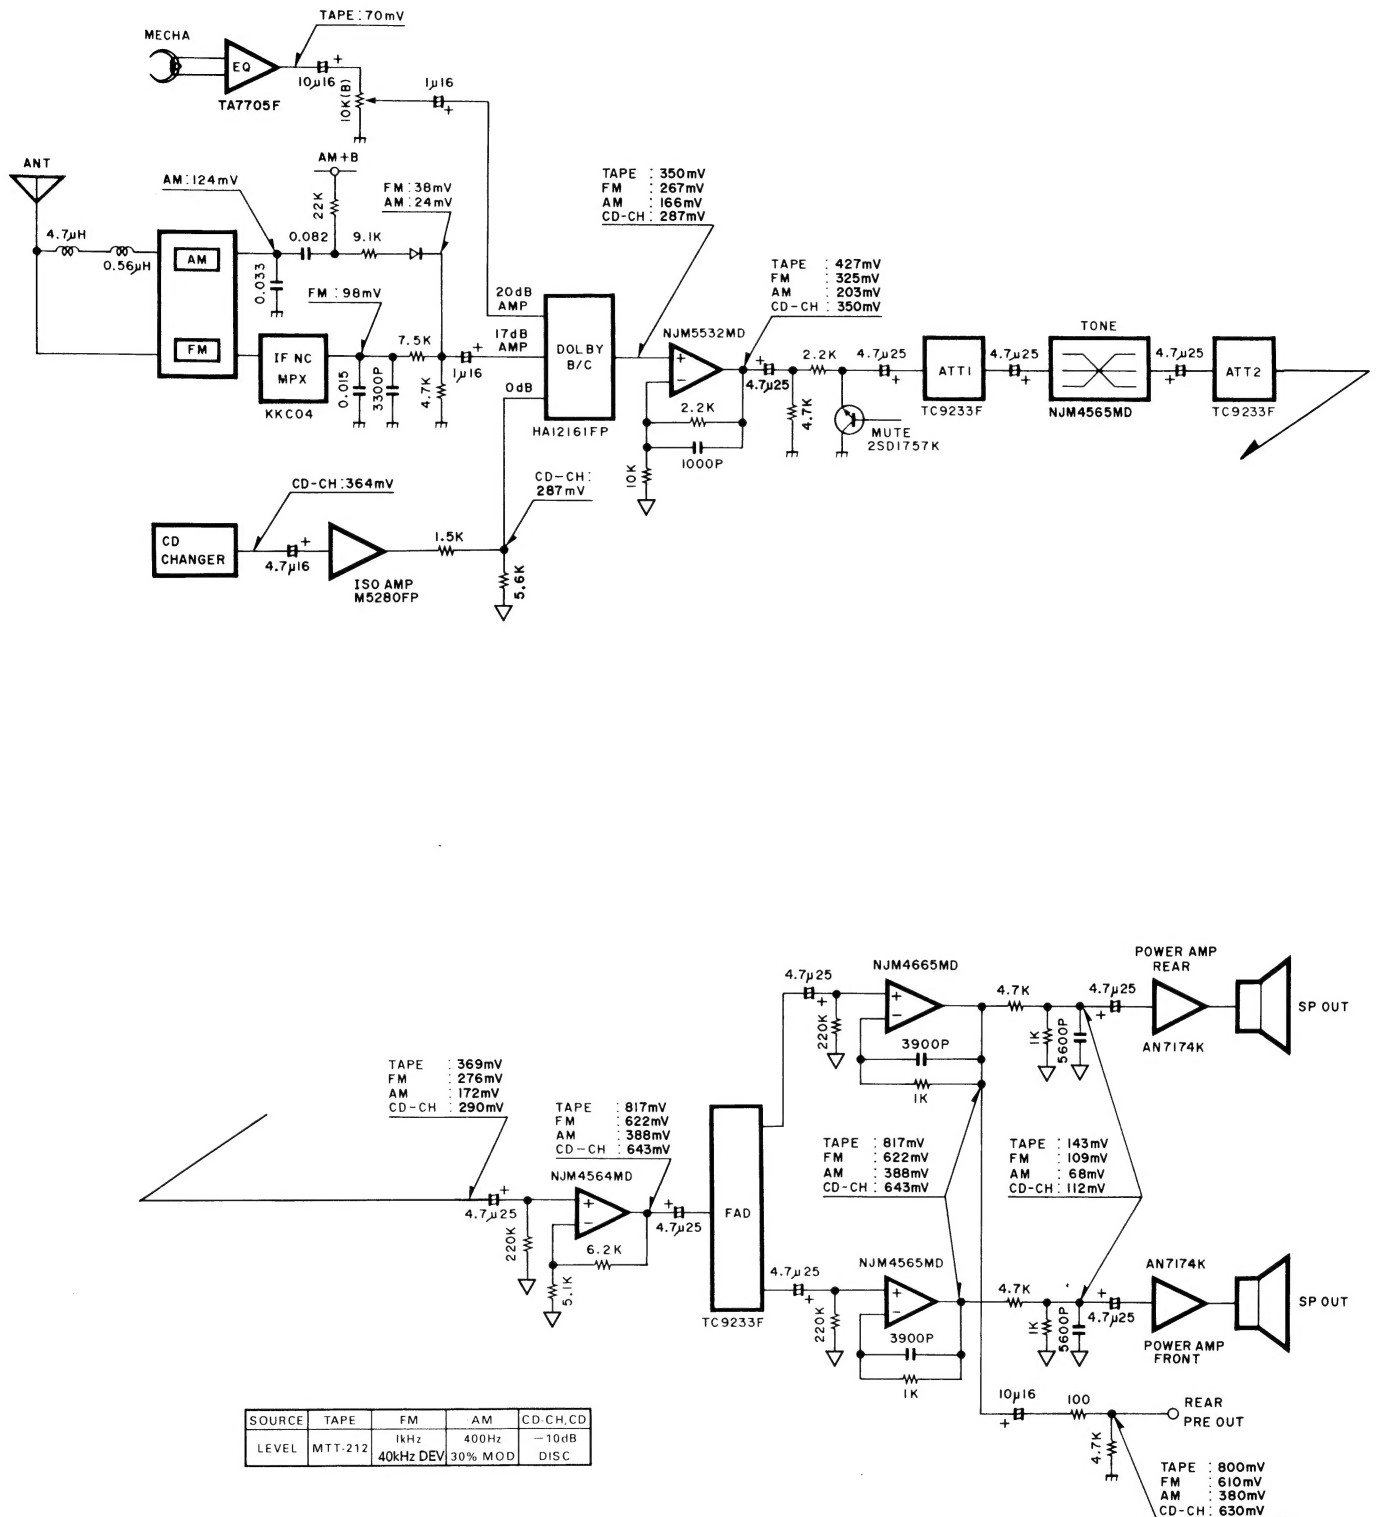

1. Remove the 5 screws (**12**).
 2. While pushing the upper and lower sections (**13**) of the front case, open the lower section (**14**).
- *Be save to engage the 5 claws (**15**) securely.

1. When assembling the rear case, fit the spring (**16**) into the hole on the case and attach the 5 screws.

BLOCK DIAGRAM

CIRCUIT DESCRIPTION

1. Description of Component

1-1. Audio Unit (X09-5042-71)

Ref No.	Name	Use and function	Description
IC1	TA7705F	Tape EQ amp	Playback equalize, head amplifier.
IC2	HA12161FP	Dolby B.C	Dolby B/C type decoder, source switching.
IC3	M5280FP	Isolation amp	Isolation amplifier for CD-CH.
IC4	NJM4565MD	1/2 Vcc buff	
IC11	TC9233FK	E-VOL	Sound volume, loudness, tone control, fader balance, attenuator.
IC12~16	NJM4565MD	Tone and buff amp	Tone control, VOL2 and FAD input buffer.
IC17, 18	NJM4565MD	Pre amp	IC17 : Rear preamplifier. IC18 : Front preamplifier.
Q1, 2	2SD1757K	EQ mute	Muting of EQ amplifier output.
Q11, 12	2SD1757K	mute	

1-2. Synthesizer Unit (X14-5002-71)

Ref No.	Semi. name	Use and function	Operation
IC1	LC7218M	PLL IC	PLL for FM/AM tuner.
IC2	TC4W66F	Analog IC	Switches LPF time constant during FM seek.
IC3	NJM4565MD	Buff	Buffer between Dolby IC and E. Volume IC.
IC4	NJM4565MD	T.ADV amp	
IC5	SAA6579T	RDS Demodulator IC	
IC6	LC6543H-4600	RDS sync μ -COM	
IC7	...	Code/security data memory	
IC8	TA7291P	Sub-motor drive IC	
IC9	LC3564QM-10	S-RAM	RAM for RDS data such as AF list.
IC10	TC74HC573AF	Latch	Latch between IC9 and IC16.
IC11	M5237ML	3-terminal-IC	For 8 V AVR.
IC12	PST572FMT	Reset IC	Lo when the supply voltage of IC16 drops below 4V.
IC13	AN7174K	Power amp	Front power amplifier.
IC14	AN7174K	Power amp	Rear power amplifier.
IC15	SN74HC367ANS	Inverter	For CD-CH data.
IC16	M38067M8D094FP	Master μ -COM	
IC17	75004GB-864-3B4	Mechanism μ -COM	
IC51	KKC04	IF/NC/MPX	IF/NC/MPX for K2I.
IC52	TA75S393F	Comparator	During K2I operation, switches the adjacent interference detection sensitivity by detecting over-modulation.
Q1	2SC2412K	BU detect	
Q2	2SC2412K	Acc detect	
Q3, 4	2SC2413K	IF amp	Q3: IF amplifier for Wide. Q4: IF amplifier for Narrow.
Q5	XDA124EK	LW/MW SW	
Q6	XDC124EK	Lo/Dx SW	
Q7	DTA144EK		
Q8	2SA1428	FM+B SW	
Q9	2SA1428	AM+B SW	
Q10	2SK536	Vt LPF	For AM.
Q12	XDC144EK	IC 2 control	
Q13	2SA1037K		
Q14	2SK536	FM Vt LPF	
Q15	2SC2412K	CRSC SW	
Q16	2SC2412K	CRSC drive	
Q17	2SC2412K	S-meter buff	
Q18	2SA1037K	S-meter drive	
Q19	2SC2412K	AM SD SW	
Q20	XDC144EK	FM mute SW	
Q21	DTA144EK	Narrow SW	In test mode.
Q22	XDC144EK	K2I/wide SW	

CIRCUIT DESCRIPTION

Ref No.	Semi. name	Use and function	Operation
Q23	XDC144EK	T.ADV circuit gain SW	Switches the gain for playback and fast winding.
Q24	XDC144EK	T.ADV circuit time constant SW	Switches the time constant for playback and fast winding.
Q25	XDA124EK	EQ mute inverter	
Q26	2SC2412K	T.ADV circuit inverter	
Q27	DTC144EK	MONO/ST SW	
Q28	DTB123YK	+B SW for sync μ -COM	
Q29	2SC2412K	AVR SW for sub motor	For IC8.
Q30	2SA1408 (O)	AVR drive for sub motor	For IC8.
Q31	XDC124EK	KICK SW	For IC8.
Q32	XDC124EK	S-RAM CE1 control	Inhibits read from or write to S-RAM while power is OFF.
Q33	2SB1370F8	8V AVR SW	Audio circuitry.
Q34	DTA114EK	8V AVR drive	Audio circuitry.
Q35	2SB1370F8	ILLUM AVR SW	
Q36	2SC2412K	ILLUM AVR drive	
Q37	DTA114EK	ILLUM AVR control	
Q38	XDC144EK	ILLUM AVR control	
Q39	2SB1370F8	5V AVR SW	Logic circuitry of μ -COM, etc.
Q40	2SC2412K	5V AVR control	Logic circuitry of μ -COM, etc.
Q41	DTB123YK	Power on 5V SW	
Q42	XDC144EK	Power on 5V drive	For the moment the power is switched ON.
Q43	2SA1036K	Remove 5V SW	
Q44	2SC2412K	Remove 5V drive	
Q48	DTA144EK	PWR amp STBY SW	Controlled by P.CON.
Q49	XDC144EK	PWR amp STBY SW	Controlled by P.CON.
Q50	2SC2412K	PWR amp STBY SW	Controlled by Acc detection or BU detection.
Q51	XDC144EK	Small in inverter	
Q52, 54	XDA124EK	TA/RA/CH SW	
Q53, 55	XDA124EK	 off/B/C SW	
Q56	XDC124EK	PWR on 5V SW	Controls IC15.
Q57	XDC144EK	DSI indicator INH.	Inhibits DSI indicator while the panel is attached.
Q58	2SC2412K	DSI indicator SW	
Q59	2SA1037K	Mute drive	
Q60	XDC124EK	Mute drive	
Q61	XDA124EK	Mute drive	
Q62	2SA1428	Motor +B SW	
Q63	DTC114EK	Motor +B drive	
Q64, 65	2SC2412K	Reel pulse buff	
Q66	2SA1428	Amver +B SW	
Q67	2SA1428	Green +B SW	
Q68	DTD123YK	Dimmer SW	
Q69	DTD123YK	Green dimmer SW	For the case in which SMALL is input.
Q70	XDC144EK	Amver +B drive	
Q71	XDC144EK	Green +B drive	
Q72	DTA144EK	Green dimmer drive	
Q73	2SC2411K	PAN 5V SW	For the case in which the panel is attached.
Q74	DTA144EK	PAN 5V drive	For the case in which the panel is attached.
Q75	XDC124EK	PAN 5V control	For the case in which the panel is attached.
Q76	DTA144EK	Manual reset SW	
Q77	XDC144EK	Manual reset SW	
Q80	2SC2411K	LCD lamp SW	
Q502	DTA144EK	AFC SW	
Q503	2SC2412K	AFC SW	
Q505	2SC2412K	CRSC SW	

KRC-954R

CIRCUIT DESCRIPTION

1-3. Switch Unit (X25-7042-71)

Ref No.	Semi. name	Use and function	Operation
IC1	75004GB-863-3B4	Panel μ -COM	Control of display, keys and remote control, communications with Master μ -COM.
IC2	PST572DMT	Reset IC	Resets Panel μ -COM.
IC3	RS-21	Remote control sensor	
IC4, 5	LC7582E	LCD driver	
Q1	DTA143XK	INH driver	Drives the LCD driver INH signal and remote control sensor power.
Q2	DTC144EK XDC144EK	INH driver SW	

1-4. Daughter Unit (X89-2002-71)

Ref No.	Semi. name	Use and function	Operation
Q1	DTA124EK	P.CON out driver	
Q2	2SA1037K	P.CON out driver	
Q3	2SB822F	P.CON out driver	
Q4	DTC114EK	P.CON driver SW	

CIRCUIT DESCRIPTION

2. KENWOOD INTELLIGENT 2 IF (K2I)

2-1. K2I IF band switch

To take proper operation according to the radio wave condition of each country, the K2I performs automatic switching of IF band by setting the IF filter bandwidth to Wide or Narrow based on the information from three detector circuits.

The three detector circuits refer to:

1. 100 kHz beat detector (100 kHz adjacent interference detection)
2. Deviation detector (Overmodulation detection)
3. Weak strength detector (Field strength detection)

By setting the IF bandwidth automatically according to the logic rule, a high-sensitivity with low noise and optimum state in any country is implemented.

2-2. Newly developed narrow-band IF filter

The previously used IF filter could not eliminate the adjacent interference within 100 kHz completely.

The newly developed IF filter has a very narrow bandwidth characteristic compared to the previous filter, and also allows to obtain stable tuning frequency and selectivity characteristics.

To make low distortion and high separation possible even with the narrow-band filter, new circuitry is used together with it.

2-3. Description of Data of K2I

2 signal selectivity

While the selectivity within ± 100 kHz with the previous ceramic filter was only about 2 dB, A selectivity of 15 to 20 dB can be achieved by using the newly developed narrow-band ceramic filter on the Narrow side. (fig. 1)

fig. 1 Notice the high selectivity (in Narrow mode) within ± 100 kHz.

CIRCUIT DESCRIPTION

3. Programme Type Codes

The PTY mode allows to search the programme type the user desired based on the broadcast content data transmitted by each network. This table shows the data on the programme types. However, at present, many radio stations do not handle this service and the areas where this function is available and the pro-

gramme types are limited.

Data in the last column of the table, No. 31 (Alarm) is transmitted with emergency broadcast. This programme type cannot be selected as one of the PTY programme types.

3-1

Code	Program type	English	Francais	Deutsch	
1	News	NEWS	INFOS	NEWS	S P E E C H
2	Current Affairs	AFFAIRS	MAGAZINE	POLITIK	
3	Information	INFO	SERVICES	SPEZWORD	
4	Sport	SPORT	SPORT	SPORT	
5	Education	EDUCATE	EDUCATIF	LERNEN	
6	Drama	DRAMA	FICTION	HOER+LIT	
7	Culture	CULTURE	CULTURE	KULTUR	
8	Science	SCIENCE	SCIENCES	WISSEN	
9	Varied	VARIED	DIVERS	UNTEAR	
10	Pop Music	POP M	M POP	POP	M U S I C
11	Rock Music	ROCK M	M ROCK	ROCK	
12	M. O. R Music	M. O. R M	M VARIEE	U-MUSIC	
13	Light Classical	LIGHT M	M CL LEG	L-KLASS	
14	Serious Classical	CLASSICS	M CL SER	E-KLASS	
15	Other Music	OTHER M	AUTRE M	SPEZ MUS	
31	Alarm	ALARM	ALERTE	ALARM	

3-2. Definition of the terms used to denote Programme Type

a. Speech-based categories

1. News
Short accounts of facts, events and publicly expressed views, reportage and actuality.
2. Current affairs
Topical programme expanding or enlarging upon the news, generally in different presentation style or concept, including documentary debate, or analysis.
3. Information
Programme whose purpose is to impart advice in the widest sense, including meteorological reports and forecasts, consumer affairs, medical help, etc.
4. Sport
Programme concerned with any aspect of sport.
5. Education
Programme intended primarily to educate, of which the formal element is fundamental.
6. Drama
All radio plays and serials.
7. Culture
Programmes concerned with any aspect of national or regional culture, including religious affairs, philosophy, social science, language, theatre, etc.

8. Science
Programmes about the natural sciences and technology.
9. Varied
Used for mainly speech-based programmes usually of light-entertainment nature, not covered by above categories. Examples are : quizzes, panel games, personality interviews, comedy and satire.

b. Music based categories

10. Pop
Commercial music, which would generally be considered to be of current popular appeal, often featuring in current or recent record sales charts.
11. Rock
Contemporary modern music, usually written and performed by young musicians.
12. M.O.R.
(Middle of the Road Music). Common term to describe music considered to be "easy-listening", as opposed to Pop, Rock or Classical. Music in this category is often but not always, vocal, and usually of short duration (<5min.).

CIRCUIT DESCRIPTION

13. Light classics

Classical Musical for general, rather than specialist appreciation. Examples of music in this category are instrumental music, and vocal or choral works.

14. Serious classics

Performances of major orchestral works, symphonies, chamber music etc., and including Grand Opera.

15. Other music

Musical styles not fitting into any of the above categories. Particularly used for specialist music, of which Jazz, Rhythm & Blues, Folk, Country, and Reggae are examples.

c. Other

16~30. Not yet assigned.

31. Alarm

Emergency announcement made under exceptional circumstances to give warning of events causing danger of a general nature.

Note: These definitions can slightly differ between various language versions.

3-3. Operation method

1. The PTY mode is initiated at press of the PROG key. (The PTY mode is canceled at the next press of the PROG key).
2. The language can be displayed by holding the CLK key depressed for 1 second.
Languages of three countries (English, French, German) can be recalled at press of preset keys 1 to 3. The selected language can be established at press of the CLK key. After this, go to step 3) below.
3. Programme type selection: keys 1 to 6, FM key, AM key.
4. PTY search starts at press of **⏮/⏭** key.
5. A station with the selected programme type is tuned (The PTY mode is cancelled in 10 seconds after tuning).
(Within 10 seconds)
6. PTY search restarts at press of **⏮/⏭** key.
(In case a station with the selected programme type cannot be searched)
7. The seek operation ends after one cycle (the PTY mode is cancelled).

3-4. Display in PTY mode

1. "NEWS" - Last programme type display.
PTY dots ON.
2. "ENGLISH" - Last language display.
PTY dots ON.
- 4, 6. "NEWS" - Programme type display.
PTY dots ON.
5. "BBC KENT" - Tuned station PS display.
PTY dots blinking.
7. "NO PTY" (2 seconds)
PTY dots OFF.

3-5. EON search method

When there are stations with the selected programme type is found in the stored EON data, they are searched in the order they are stored in the SRAM. If the **⏮/⏭** key is pressed again within 10 seconds after tuning a station with the selected programme type, the next network is searched. After searching based on the EON data has completed, the PTY seek operation occurs,

- The PI code of the last channel is not searched even when it exists in the data.
- After the seek operation is started, the PI code is confirmed unconditionally every time SD is detected (including stations tuned in EON search).
- The language can be selected from English, French and German.

3-6. Modification of TI Search function in '93 model

- Auto TI search is not executed with the TUNER source.
But, the TI dots blink at the timing of search. (It is executed like before with other sources.)
Reason: To prevent TI search from occurring in case the station tuned by search in the PTY mode is not a TP station.

3-7. Modification of specifications of SDK model with timer function in '93 model

- Auto SK search is not executed with the TUNER source. However, the SDK dots blink at the timing of search.
(It is executed like before with other sources.)
Reason: To prevent auto SK search from occurring in case the station tuned by the timer function is not a SK station.

CIRCUIT DESCRIPTION

4. Security Data Read/Write Specifications

The security data memory is read or written at timings (1) ~ (5) described in the following.

4-1. Code entry method

- 1. After turning power ON, press and hold the K2I key for more than 3 seconds.
- 2. Preset keys [1] ~ [4]

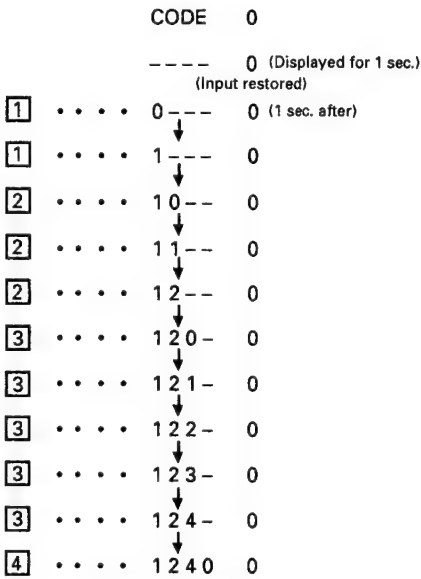

- End of entry until the 4th digit.
- 3. Press and hold the K2I key for more than 3 seconds....End of code entry.
 - The security mode is turned ON if the code is OK (1)
 - Hereafter, the security mode can be turned ON/OFF by holding the K2I key depressed for more than 3 seconds (2)

4-2. Code request

In the security mode, the code request is issued when returning from BACK UP OFF or after reset ..(3)

1. Power ON

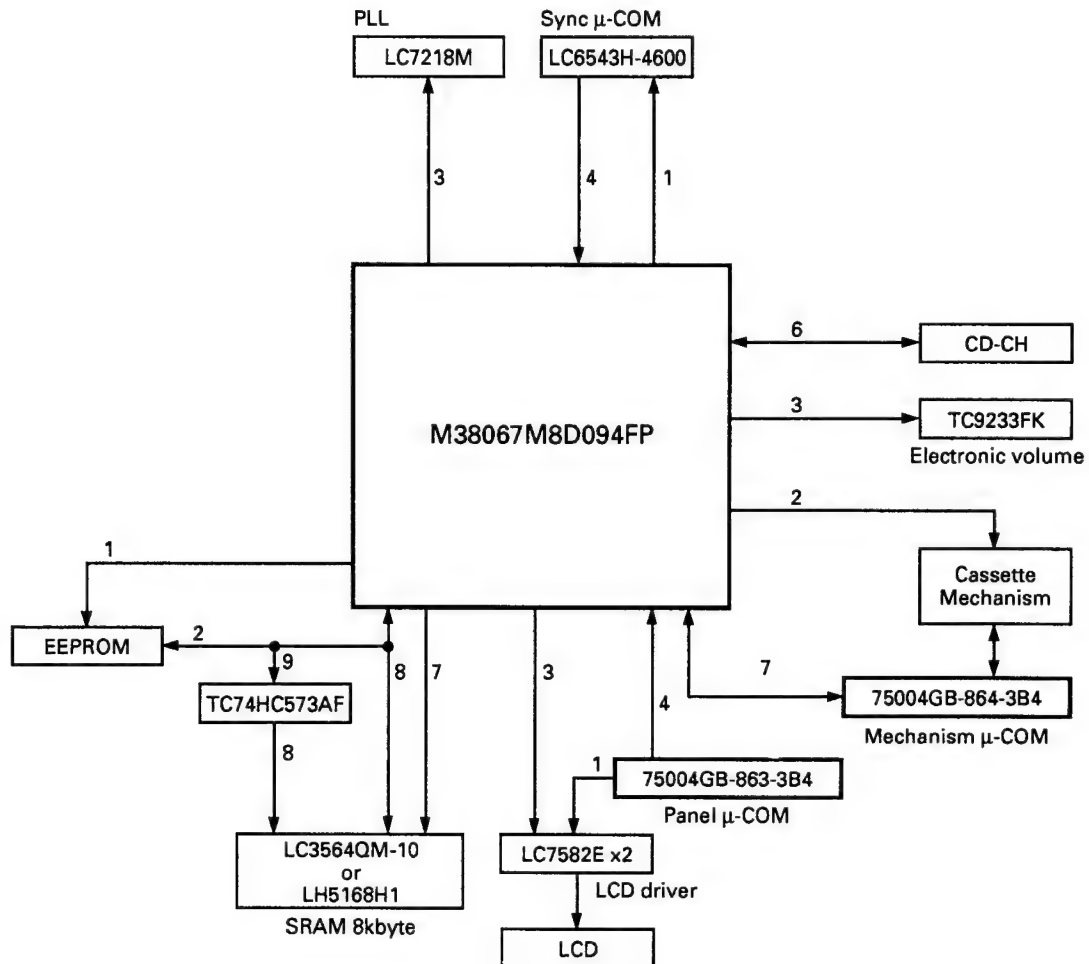

- 2. After the entry until the 4th digit, press and hold the K2I key for more than 3 seconds to establish.
 - When the code is OK....Power ON (4)
 - Second time and after : When the code is No Good WAIT (Entry is head for 5 min.) (5)
- 5 minutes later....---- (Entry possible)
- Hereafter, the hold time after the entered code is No Good changes as shown below.
- 1st try0
 - 2nd try0
 - 3rd try5 minutes
 - 4th try1 hour
 - 5th try and after24 hours
- (The try count is displayed on the right.)

- (1) The security mode is permitted by the entry of the correct code.
Security mode ON write.
- (2) Security mode ON/OFF write.
- (3) Security mode data read after reset or when the set is attached (Security code, No Good try count, other data).
- (4) 0 is written in No Good try count.
- (5) The No Good try count is incremented by +1 and written.

CIRCUIT DESCRIPTION

KRC-954R

CIRCUIT DESCRIPTION

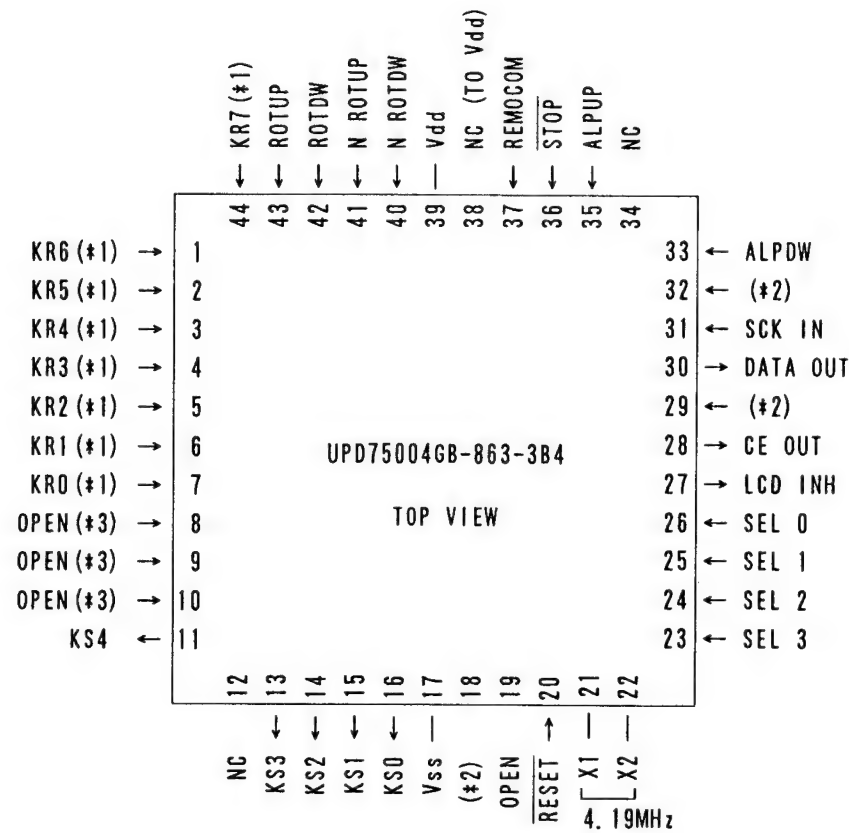

6. IC1: 75004GB-863-3B4 (X25-7042-71)

Panel Microcomputer

Summary

This microcomputer is mounted in the panel of the '92 model with detachable panel specifications, and used to send the key data, remote control data and rotary control data inputs to the System Controller as command data. The System Controller operates based on the input commands.

6-1. Pin connection

CIRCUIT DESCRIPTION

6-2. Terminal Description (All pin numbers refer to flat package types.)

Pin No.	Pin Name	I/O	Description
1~7	KR6~KR0	I	Key Return 6~0 (Active Low). Internally pulled up. Programme selection.
8, 9		I	Not used. Open. Internally pulled up. Mask option.
10		I	Not used. Open. Internally pulled up. Mask option.
11	KS4	O	Key Scan 4 (Active Low). Open drain terminal. (Diode is not necessary).
12	NC	–	No Connection. Open.
13~16	KS3~KS0	O	Key Scan 3~0 (Active Low). Open drain terminal. (Diode is not necessary).
17	Vss	–	μ-COM earth GND.
18	XT1	–	Not used. Connected to Vdd or Vss.
19	XT2	–	Not used. Open.
20	RESET	I	Reset input.
21, 22	X1, X2	–	Ceramic oscillator connection terminal. (4.19 MHz)
23~26	SEL3~SEL0	I	Model selection check terminal. (Selected according to pull-up/pull-down).
27	LCDINH	O	LCD driver inhibit terminal.
28	P_CE	O	Key data send request.
29		I	Not used. Connected to Vdd or Vss.
30	P_DATA	O	Key data line.
31	P_CLK	I	Key data clock. (Max. 1 MHz)
32		I	Not used. Connected to Vdd or Vss.
33	NARTDW	I	Input to phase-type, double-edge rotary encoder. (Down)
34	NC	–	No Connection. Open.
35	NARTUP	I	Input to phase-type, double-edge rotary encoder. (Up)
36	P_STOP	I	Stop request (oscillation stop).
37	REMO	I	Remote control data input.
38	NC	–	Vdd.
39	Vdd	–	Power supply terminal, 5 V.
40	NRTDW	I	Input to phase-type, single-edge rotary encoder. (Down)
41	NRTUP	I	Input to phase-type, single-edge rotary encoder. (Up)
42	RTDW	I	Input to rotation direction pulse input type rotary encoder. (Down)
43	RTUP	I	Input to rotation direction pulse input type rotary encoder. (Up)
44	KR7	I	Key Return 7 (Active Low). Internally pulled up. Programme selection.

NOTE : All of the unused rotary encoder inputs must be pulled down to Vss.

CIRCUIT DESCRIPTION

6-3. Terminals required for control

(1) System controller

Name	I/O	Contents
PANCON	O	Panel power supply terminal. When the panel is attached, supplies power to the panel for initial start-up of the Panel μ -COM. Interlocked with the RESET terminal of the Panel μ -COM.
PANIN	I	Terminal for detecting that the panel is attached on the head unit. PANCON must be turned OFF while the panel is not attached.
P_STOP	O	Stop request to Panel μ -COM. When power or Acc is turned OFF, sets the Panel μ -COM to the stop status in order to reduce the Back Up current. As the Panel μ -COM inhibits the LCD driver at the positive going of this terminal, the LCD display disappears for 1 second when this output is dropped for a moment. Therefore, to cope with possible terminal contact failure, this terminal is provided with a time constant of 20 to 30 ms in the hardware. In case the output from this terminal is dropped, the System Controller should take this time constant in consideration and wait to ensure before restarting.
P_CE	I	Key data send request from Panel μ -COM.
P_CLK	O	Clock output to Panel μ -COM.
P_DATA	I	Key data input from Panel μ -COM.

(2) Panel μ -COM

Name	I/O	Contents
RESET	I	Every time the System Controller turns PANCON output ON, this terminal is reset and the initial start of Panel μ -COM occurs. At this time, the Panel μ -COM checks that the EJECT key is ON and sends test mode codes.
STOP	I	Stop request input, which sets the Panel μ -COM immediately in the stop status. Even in stop status, key codes of certain keys continue to be transferred.
P_CE	O	Key data send request to System Controller.
P_CLK	I	Clock from System Controller.
P_DATA	O	Key data output to System Controller.

CIRCUIT DESCRIPTION

6-4. Key matrix

- Key matrix and specifications of microcomputer for detachable panel

* KRC-1054R/KRC-954R

KEY RETURN	KEY SCAN	KS4 P50 (11pin)	KS3 P43 (13pin)	KS2 P42 (14pin)	KS1 P41 (15pin)	KS0 P40 (16pin)
KR0 (with built-in pull-up R) P60 (7pin)		(SORCE) 90H	(AUDIO) 88H ★	AM 80H ★	① (AUTO) 78H ★	PRESET 1 ★ KEY CORD : 70H
KR1 (with built-in pull-up R) P61 (6pin)	EJECT	91H		FM 81H ★	② (LOCAL) 79H ★ A•ME	PRESET 2 ★ 71H

KR6 (with built-in pull-up R) P72 (1pin)						
KR7 (with built-in pull-up R) P73 (44pin)						

All pin numbers refer to flat package pins.

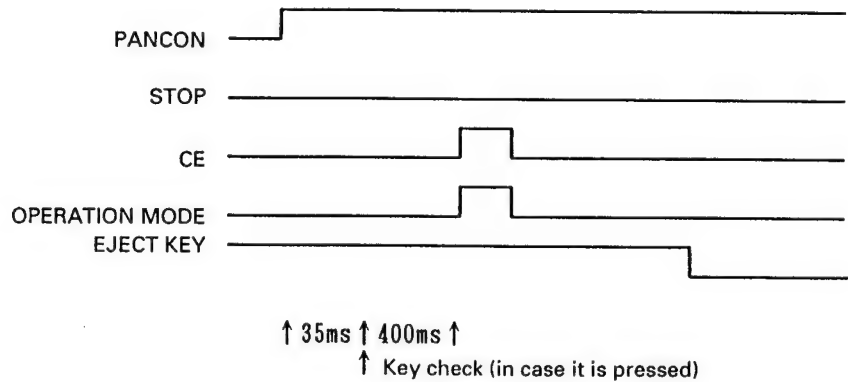

- * Even while the STOP command to the Panel μ -COM is in effect, when one of the 8 keys assigned to KS4 is pressed to ON, the stop status is released and the key code is sent. This makes the System Controller possible to return from the Power OFF status.
- * As for the remote control codes, when a valid custom code is input, the key code is transferred provided that the key code is from 00H to 1FH.

KRC-954R

CIRCUIT DESCRIPTION

6-5. Timing chart

(1) Reset by RESET switch on the panel

When the Panel μ -COM is reset, Whether the TAPE (Source) or EJECT key is pressed ON or not is checked in the initial processing, and "51H" (TAPE) and "52H" (TAPE) are sent if the key is pressed, and "50H" is sent if it is not.

(2) POWER key pressed ON in stop status

When the POWER key is pressed ON, one of three kinds of key codes shown below are sent. The System Controller executes the power ON operation according to the key code.

- I. In case 1 + 5 are also pressed simultaneously
: "61H" Destination change
- II. In case 2 + 3 are also pressed simultaneously
: "62H" Not used

- III. In case 1 + 3 are also pressed simultaneously
: "63H" DSI
- IV. In case TONE is pressed simultaneously
: "64H" Security
- V. Other status than I, II, III and IV above
: "60H"

* As the same processing as (3) is executed with the timings marked *, the System Controller should ignore them.

CIRCUIT DESCRIPTION

(3) When Acc is turned ON in case the last power OFF was executed by turning Acc OFF

When the POWER key is pressed ON, one of three kinds of key codes shown below are sent. The System Controller executes the power ON operation according to the key code.

I. In case 1 + 5 are also pressed simultaneously
: "61H" Destination change

II. In case 2 + 3 are also pressed simultaneously
: "62H" Not used

III. In case 1 + 3 are also pressed simultaneously
: "63H" DSI

IV. In case TONE is pressed simultaneously
: "64H" Security

V. Other status than I, II, III and IV above
: "60H"

(4) When the panel is attached in case the last power OFF was executed by detaching the panel In this case, the last power ON status is stored in memory and the unit starts with TUNER ON.

As the Panel μ -COM cannot judge where a start is caused by resetting the unit or attaching the panel, it executes both processing (1) and (3). As a result, the System Controller executes processing (1) (ignoring key commands) first, then executes processing (3) (ignoring key commands).

KRC-954R

CIRCUIT DESCRIPTION

(5) When the EJECT, TUNER, TAPE or CD-CH key is pressed in stop status

(6) Timing in case of momentary power failure

In case of momentary power failure, because the panel power and the STOP terminal are provided with time constants, the status should be held for 200 ms or more after PANCON or STOP is stopped.

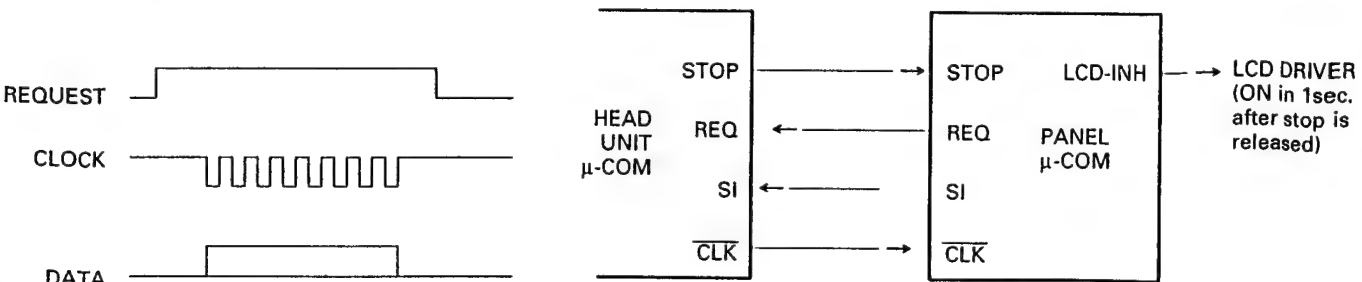

6-6. Communication method (3-wire, unidirectional)

The head unit outputs CLOCK (8 bits) at the positive going of REQUEST from the Panel μ -COM. The data the head unit receives at this time becomes the key data.

If the Panel μ -COM does not receive the CLOCK input within 100 ms after it rises REQUEST, it identifies a communication error, turns REQUEST OFF and restart the communication.

While STOP is Low, this restart operation is tried up to 5 times per key input, and after the 5th try the panel returns in the stop status.

The Panel μ -COM uses the serial ports. Data is input at the positive going of CLOCK.

KRC-954R

MECHANISM OPERATION DESCRIPTION

Fig. 1

KRC-954R

MECHANISM OPERATION DESCRIPTION

Mechanism operation modes

Each mode undergoes the following sequence:

Each mode is determined by the positions of the FR and PRO plates.

MECHANISM OPERATION DESCRIPTION

1. Loading

When the cassette tape is pushed in ❶, the loading arm (16) moves via the pack slider (101)... ❷. Thus, the pack-in switch (S1) detects this... ❸, and the sub motor (M2) makes normal rotation... ❹.

The rotation of the sub motor (M2) causes the load gear (38) to rotate by way of the idle gear... ❺.

The load gear (38) provides the rotation of the loading arm (16) by its pin... ❻, to load in the cassette tape.

2. PACK DOWN

When the load gear (38) further rotates ❷, the action arm (21) also rotates ❸ to lower the action plate (14)... ❹, by way of the action plate spring (87)... ❺.

KRC-954R

MECHANISM OPERATION DESCRIPTION

3. Change from load gear to mode gear

When the load gear (38) further more rotates ⑪, the boss under it pushes against the boss of the mode gear (43)... ⑫, so that the mode gear (43) rotates after the shift of its non-toothed section... ⑬.

Thus, the load gear (38) stops rotation on account of its non-toothed section coming.

4. REW

When the mode gear (43) rotates ⑭, the FR plate (26) under it moves ⑮. The cam of the FR plate (26) works to rotate the FR arm (24)... ⑯.

Further, the FR arm (24) moves to transmit the rotation of the flywheel (8) to the reel gear (31)... ⑰.

At this time, a slot (REW hole) of the FR plate (26) is detected by the mode sensor (PH3)... ⑱, to stop the rotation of the sub motor.

For REW or FF, due to the groove of the FR plate (26)... ⑲, the head plate (805) advances ⑳ so that the head moves to a position at which T-ADV is feasible.

KRC-954R

MECHANISM OPERATION DESCRIPTION

5. FF

When the sub motor further rotates, the cam of the FR plate (26) moves ②① so that the FR arm (24) is rotated in the reverse direction... ②②. Thus, a slot (FF hole) of the FR plate (26) is detected by the mode sensor (PH3) to stop the rotation of the sub motor.

6. Change from FR plate to PRO plate

When the sub motor further more rotates, the knob of the FR plate (26) hits against the knob of the PRO plate (27)... ②③, so that the PRO plate (27) moves.

Thus, the rack of the PRO plate (27) enters into engagement with the mode gear... ②④. Then, the rack of the FR plate (26) is disengaged from the mode gear because of its non-toothed section coming... ②⑤. The mode plate spring (88) assists in this operation.

7. FWD PLAY

When the PRO plate (27) moves ②⑤, the takeup plate F is rotated by the cam of the PRO plate (27) and the takeup gear (44) engages with the reel assy (31)... ②⑥. The rotation of the flywheel (8) is transmitted to the reel assy (31) by way of the takeup gear (44)... ②⑦. Thus, a slot (FWD hole) of the PRO plate (27) is detected by the mode sensor (PH3) to stop the rotation of the sub motor.

KRC-954R

MECHANISM OPERATION DESCRIPTION

The groove of the PRO plate (27) serves to advance the head plate (805)... 28, to move the head and the pinch roller (48) to their FWD PLAY position. The pinch roller (48) is contacted to the capstan (8) by pressure due to the shift to the takeup plate and the force of the pinch roller spring... 29.

8. REV PLAY

When the PRO plate (27) further moves, the takeup plate F returns by the cam of the PRO plate (27)... 31, and the takeup plate R rotates 32.

The rotation of the flywheel is transmitted to the reel assy (31) by way of the takeup gear (44)... 33.

Thus, a slot (REV hole) of the PRO plate (27) is detected by the mode sensor (PH3) to stop the rotation of the sub motor.

9. STANDBY (PAUSE)

From a given mode, when the head plate (805) regresses due to the reverse rotation of the sub motor rotates, when the pause switches (S3) acts ("L" to "H") to stop the rotation of the sub motor, the pause mode is entered.

MECHANISM OPERATION DESCRIPTION

10. EJECT

When the sub motor is reversely rotated, an operation reverse to the loading operation is performed to eject the cassette tape.

11. SHUTTER DOOR

For loading or eject, the door arm (28) is actuated by the pin of the load gear (38). The door arm (28) moves the door lever (30) forwards or backwards to open or close the cassette door (lid).

12. AUTO REVERSE

The tape end is detected by the sensor which senses the reel rotation.

13. AUTO METAL

The auto metal switch (S4) detects the high position hole of the cassette tape when the head plate (805) is advancing.

KRC-954R

ADJUSTMENT

L M N O P Q R S T

- DC voltages are as measured with a high impedance voltmeter. Values may vary slightly due to variations between individual instruments or/and units.
- Die angegebenen Gleichspannungswerte wurden mit einem hochohmigen Voltmeter gemessen. Dabei schwanken die Meßwerte aufgrund von Unterschieden zwischen einzelnen instrumenten oder Geräten u.U. geringfügig.

CAUTION : For continued safety, replace safety critical components only with manufacturer's recommended parts (refer to parts list). ⚠ Indicates safety critical components. To reduce the risk of electric shock, leakage-current or resistance measurements shall be carried out (exposed parts are acceptably insulated from the supply circuit) before the appliance is returned to the customer.

SPECIFICATIONS

FM tuner section

Frequency range 87.5MHz~108.0MHz
Usable sensitivity 1.1 μ V/75 Ω
Stereo sensitivity (S/N=46dB) 1.6 μ V/75 Ω
Frequency response (\pm 4.5dB) 30Hz~15kHz
Signal to noise ratio (IEC-A) 68dB
Selectivity 70dB (\pm 400kHz)
40dB (\pm 200kHz : K2I OFF)
75dB (\pm 200kHz : K2I ON)
Stereo separation (1kHz) 35dB
19kHz carrier leakage 65dB

MW tuner section

Frequency range 531kHz~1611kHz
Usable sensitivity 30 μ V

LW tuner section

Frequency range 153kHz~281kHz
Usable sensitivity 60 μ V

Cassette deck section

Tape speed 4.76cm/sec.
Wow & flutter (WRMS) 0.09% WRMS
Fast winding time 100sec. (C-60)

Frequency response(+4dB, -6dB)

..... 30Hz~18kHz (120 μ s)
30Hz~20kHz (70 μ s)

Stereo separation (1kHz) 40dB

Signal to noise ratio (IEC-A)

..... Dolby B-C NR OFF : 55dB

Dolby B NR ON : 65dB

Dolby C NR ON : 72dB

Audio section

Power output 25Wx4 max power output

20Wx4 into 4 Ω , 1kHz at 10% THD

15Wx4 into 4 Ω , at 1kHz at 1% THD

Tone action Bass : 100Hz \pm 10dB

Treble : 10kHz \pm 10dB

Preout level/impedance 800mV (max)/180 Ω

General

Operating voltage 14.4V (11~16V allowable)

Current consumption 7.5A at rated power

Dimensions (WxHxD) 188x58x175mm

Installation size 182x52x154mm

Weight 1500g

Note : KENWOOD follows a policy of continuous advancements in development. For this reason specifications may be changed without notice.

Note :

Component and circuitry are subject to modification to insure best operation under differing local conditions. This manual is based on, the Europe (E) standard, and provides information on regional circuit modification through use of alternate schematic diagrams, and information on regional component variations through use of parts list.
